

## Beetle Long GLOW-Juice (1 02 513)

### Components included:

#### **Beetle LongGlow-Juice**

**100ml**

Reagent for the detection of Firefly-Luciferase. **Store at +4°C.**

#### **Substrates**

**1 vial** → for 100 ml Beetle-LongGlow Juice

**Store at -20°C.**

*Note: Do not combine this buffer with marine luciferases because the reagent contains detergents. The combination of detergents with the substrate of marine luciferases (Coelenterazine) leads to autoluminescent reactions.*

### Reconstruction:

Beside the black buffer-bottle the kit is equipped with another tube includes the substrates. Dissolve the substrates in the reagent and mix them by gently shaking. Afterwards the ready-to-use reagent can be stored at +4°C for 2-5 days and at -20°C for 2 weeks.

### Preparation of Cell Lysates:

For the preparation of cells for measuring with Beetle-LongGlow Juice please use your standard lysis buffer or PJK's Lysis-buffer for Firefly Assays (Lysis-Juice).

### Standard Protocol

Program Luminometer:

After adding the Beetle Long Glow-Juice to the cell lysate a stable luminescent signal occurs over 5 hours duration. For the measuring in the luminometer we suggest a measurement duration of 5 sec. and a delay of 2 sec. for each sample.

- 1.) At first transfer 20µl cell lysate into your luminometer tube / well.
- 2.) After that add the ready-to-use **Beetle-LongGlow Juice**.
- 3.) Measurement starts after 2 sec. delay for 5 sec. duration.

## Beetle Long GLOW-Juice (1 02 513)

### Standard procedure:

**Program Luminometer**  
(delay 2sec./measurement duration 5sec)

### Optional: parallel measurement in Duo- or Triple-Well System (Firefly/ Renilla/ Gaussia/ AP/ $\beta$ -Gal)

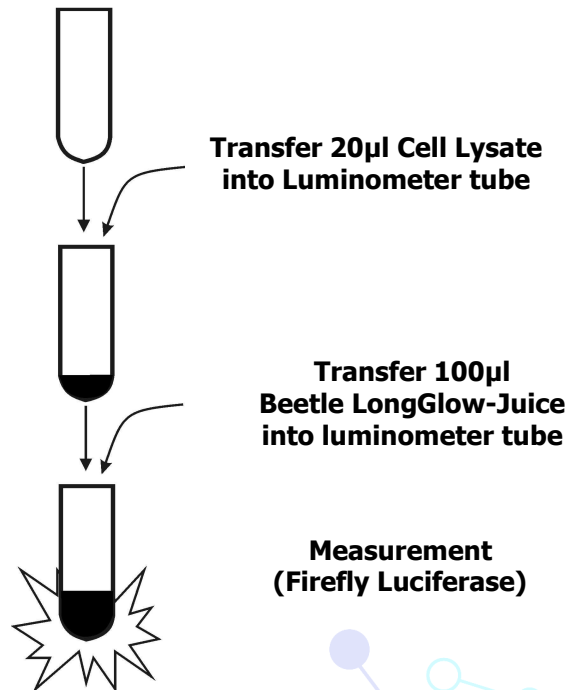

Split the Cell Lysate and transfer to different tubes for measuring several enzymes in one sample.
